astryx

A React design system for people and AI: 150+ components, CSS-variable themes, a CLI.

Astryx (MIT, from Meta) is an open-source design system that grew inside Meta: 150+ typed React components, themes made of CSS variables, seven ready-made themes and a command line. Conventions, docs and CLI are designed together so people and agents build the same way.

How it works in six steps

1. **Install core and a theme** — @astryxdesign/core
2. **Import prebuilt CSS** — no build plugin needed
3. **Use typed components** — 150+ React components
4. **Tune the theme** — override CSS variables
5. **Ask the CLI for docs** — astryx docs, component
6. **Swizzle the source** — when you need to go deeper

Quick start

```
# Install the packages
npm install @astryxdesign/core \
@astryxdesign/theme-neutral \
@stylexjs/stylex

# Install the CLI
npm install -D @astryxdesign/cli

# List the components
npm run astryx -- component --list

# CSS imports and theme setup
the README of packages/core

# Needs: React 19 or later (react and react-dom are peer dependencies of @astryxdesign/core)
```

Key commands / features

- `astryx component --list` — list the components
- `astryx docs global` — how global install works
- `npm i -g @astryxdesign/cli` — CLI for the whole machine (optional)
- `swizzle` — eject a component's source into your project
- `@astryxdesign/theme-*` — seven ready-made themes

Growth

Two real points: the start of the window and today, axis from zero. The gain is as reported by GitHub Trending; we did not rebuild the star history.

Why this repo exists

- Interfaces are now built by people and agents together; agents guess wrong prop names when conventions are unclear.
- One system with consistent conventions and machine-readable docs keeps interfaces consistent.

What to use it for

- Build consistent interfaces from typed components
- Change the look with a theme, no fork
- Let agents look up docs through the CLI
- Eject one component's source to edit it

Think twice before you use it

- The README says the project is in beta: the API may change.
- Needs React 19 or later.
- The chart packages (vega, charts) are canary only, no stable release yet.
- The 13,000+ internal apps figure is the authors' claim, not independently verified.
