KIEU STUDIO · GITHUB RADAR · EPISODE 4 · CHEAT SHEET

hyperframes

Write HTML. Render video. Built for agents.

An open-source framework that turns HTML, CSS, media and seekable animations into deterministic MP4 videos (same input, same video). Use it from the command line or through skills for coding agents.

How it works in six steps

1. **Request** — the agent plans the video
2. **HTML file** — data-start · data-duration · data-track-index
3. **Animation** — GSAP, CSS, Lottie, Three.js, Anime.js, WAAPI (seekable)
4. **Preview** — browser + lint
5. **Render** — headless Chrome steps frame by frame
6. **FFmpeg** — encodes the MP4

Quick start

```
# Install the skills for your agent (once)
npx hyperframes skills update

# Claude Code (plugin)
claude plugin marketplace add heygen-com/hyperframes
claude plugin install hyperframes@hyperframes

# Do it yourself with the CLI
npx hyperframes init my-video
npx hyperframes preview # preview
npx hyperframes render # make the MP4

# Add a ready-made block
npx hyperframes add data-chart

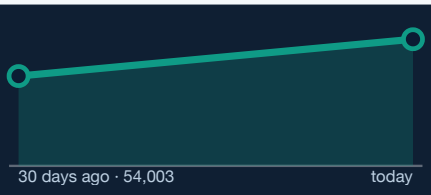

# Needs: Node.js 22+, FFmpeg
```

Example prompt: Using /hyperframes, create a 10-second product intro with a fade-in title, a background video, and subtle background music.

Key commands / features

- **`/hyperframes`** — read first: the render contract and workflow
- **`/hyperframes-cli`** — scaffold, check, preview, render
- **`/hyperframes-registry`** — about 450 ready-made blocks and components
- **`/media-use`** — music, sound effects, images, voiceover, captions

Growth

Two real points: the start of the window and today, axis from zero. The gain is as reported by GitHub Trending; we did not rebuild the star history.

Why this repo exists

- Agents are already good at writing HTML: no proprietary timeline and no React project to learn.
- The command line is non-interactive by default, which suits agents and CI.

What to use it for

- Product intros and feature announcements
- Animated charts, maps, chart races
- Vertical videos with kinetic captions
- Turn docs, PDFs and web pages into video

Think twice before you use it

- The README lists Studio as "Available, evolving" (still in development).
- The /media-use skill can use HeyGen services or free local tools: check what leaves your machine.
- The comparison with Remotion is the authors' own (README); Kieu Studio has not verified it.
