KIEU STUDIO · GITHUB RADAR · EPISODE 9 · CHEAT SHEET

t3code

An open-source control panel for coding agents, usable from your phone too.

T3 Code is an "agent harness control surface": a web, desktop (Electron), iOS and Android interface that controls the agents already installed on your machine (Claude Code, Codex, Cursor, Grok Build, OpenCode, Antigravity, fx). It is not an agent itself: at least one signed-in agent is required.

How it works in six steps

1. **Install where agents run** — desktop, server or VPS
2. **Finds installed agents** — Claude Code, Codex, Cursor...
3. **Agent runs on that machine** — code goes straight to the provider
4. **Turn on remote access** — t3 up: T3 Connect / local network
5. **Another device connects** — iOS, Android, browser
6. **Pick a permission mode** — supervised → full access

Quick start

```
# Sign in to an agent first
claude auth login # or: codex login

# Install from the command line
curl -fsSL https://t3.codes/install.sh | sh
t3

# Try it without installing
npx t3@latest

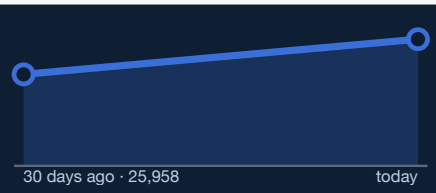

# Remote control
t3 up

# Needs: At least one signed-in agent on the machine that runs the server (Claude Code, Codex, Cursor...)
```

Key commands / features

- **`t3`** — start the server and open the web app
- **`t3 up`** — turn on remote access (T3 Connect / local network)
- **`t3 status`** — show the access settings
- **`t3 pair`** — create a fresh pairing link
- **`t3 service install`** — keep it running as a background service

Growth

Two real points: the start of the window and today, axis from zero. The gain is as reported by GitHub Trending; we did not rebuild the star history.

Why this repo exists

- Every agent has its own interface and is only comfortable to use while you sit in front of the machine.
- One control panel that uses the subscriptions you already have, with remote access over T3 Connect, your local network or Tailscale.

What to use it for

- Run agents on a home machine or VPS and steer them from your phone
- Use Claude Code, Codex and Cursor in one interface
- Approve every command with Supervised mode
- Let outside agents (over MCP) start and message threads

Think twice before you use it

- Very early project: the README says "Expect bugs" and mostly does not accept big contributions yet.
- The default permission mode is Full access: the agent runs commands and edits files without asking. Switch to Supervised first.
- Basic usage events are sent (provider, model, permission mode, token totals; no prompts or files); turn them off with T3CODE_TELEMETRY_ENABLED=false.
- Installing with curl | sh: read the script first. The phone is only a remote, the machine running the agent must stay on. T3 Connect is free for up to 3 machines ("for now").

Tried it? Kieu Studio has not run this tool.

Sources: the repo's README, https://github.com/pingdotgg/t3code, https://t3.codes. Stars: GitHub API; gains: GitHub Trending (as reported by Trending), snapshot Nov 1, 2026; stars measure attention, not quality: re-check before relying on them. Summarized in Kieu Studio's own words; commands copied from the README; no third-party logos or screenshots.
