A command-line tool that installs, finds, updates and removes agent skills (reusable instructions that teach an agent one job) for many coding agents at once. It detects the agents on your machine and installs to the right folder. Supports OpenCode, Claude Code, Codex, Cursor and 75 more.

How it works in six steps

1. **Source** — a GitHub repo of skills
2. **Pick a skill** — skills add / skills find
3. **Pick agents** — detects the agents you have
4. **Install** — current project; -g shares across all projects
5. **Check for updates** — skills check
6. **Update or remove** — skills update / skills remove

Quick start

```
# Install from a repo
npx skills add vercel-labs/agent-skills

# Preselect a skill and an agent
npx skills add vercel-labs/agent-skills --skill web-design-guidelines -a claude-code

# Use without installing
npx skills use vercel-labs/agent-skills@web-design-guidelines --agent claude-code

# Create your own skill
npx skills init my-skill # then edit SKILL.md

# Needs: Node.js 22.20 or newer
```

Key commands / features

- `npx skills add <source>` — install skills from a repo
- `npx skills find [query]` — search for skills
- `npx skills list` — see installed skills
- `npx skills check` — check for updates
- `npx skills update [skill...]` — update

Growth

Two real points: the start of the window and today, axis from zero. The gain is as reported by GitHub Trending; we did not rebuild the star history.

Why this repo exists

- Every agent stores skills in a different folder: one skill means copying it by hand, and versions drift.
- One command: pick the skill, pick the agents, install for this project or for all.

What to use it for

- Use Claude Code, Cursor and Codex side by side
- Keep a team's skills in sync across projects
- Write and share your own skills
- Discover skills at skills.sh

Think twice before you use it

- A skill is an instruction your agent will follow: read its SKILL.md before installing a stranger's skill.
- The CLI collects anonymous usage data; set DISABLE_TELEMETRY=1 or DO_NOT_TRACK=1 to turn off telemetry and security-audit requests.
- experimental_sync and experimental_install are still experimental.

Sources: the repo's README, https://github.com/vercel-labs/skills, https://skills.sh. Stars: GitHub API; gains: GitHub Trending (as reported by Trending), snapshot Oct 31, 2026; stars measure attention, not quality: re-check before relying on them. Summarized in Kieu Studio's own words; commands copied from the README; no third-party logos or screenshots. **Disclosure:** drafted with AI assistance; the voice and presenter in the videos are AI-generated.
