An open-source template with 49 agents, 74 skills, 15 hooks, 14 rules and 62 document templates, organised like a three-tier game studio, with separate agent sets for Godot, Unity and Unreal. You still make every decision.

How it works in six steps

1. **Tier 1: directors** — creative, technical, producer
2. **Tier 2: department leads** — design, code, art...
3. **Tier 3: specialists** — Godot, Unity, Unreal
4. **Slash commands** — 74 commands by stage
5. **Hooks and rules** — check commits, file writes
6. **Run it, watch the game** — screenshots as proof

Quick start

```
# Clone it as your project
git clone https://github.com/Donchitos/Claude-Code-Game-Studios.git my-game
cd my-game

# Open Claude Code at the root
claude

# Start
/start

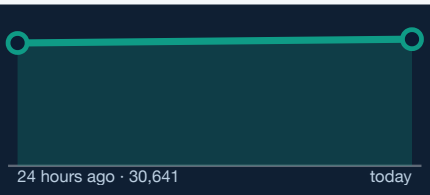

# View or change the process level
/settings modes.rigor=full

# Needs: Git, Claude Code, Python 3, Bash (jq recommended)
```

Key commands / features

- **`/start`** — asks where you are in the project
- **`/brainstorm`** — explore ideas from scratch
- **`/setup-engine`** — configure the engine (Godot, Unity, Unreal)
- **`/project-stage-detect`** — analyse an existing project
- **`/settings`** — view or change settings

Growth

Two real points: the start of the window and today, axis from zero. The gain is as reported by GitHub Trending; we did not rebuild the star history.

Why this repo exists

- A chat session has no structure: nobody reviews the design and the code gets messy.
- Give your session a studio's structure: directors, department leads and specialists, with quality gates and proof from running the real game.

What to use it for

- Make a game solo with studio structure
- Draft GDDs, ADRs and sprint plans from ready templates
- Choose Godot, Unity or Unreal
- Raise the process level as the project grows

Think twice before you use it

- A process template: no game is included.
- The author measured four builds: the most documented one ranked last, so the default mode is minimal.
- Hooks run Bash commands on your machine; Python 3 is needed to validate data.
- Latest push: Oct 19, 2026.
