ECC

An engineering system for agents: plan, test first, review, remember.

ECC is an open-source (MIT) toolkit you install into a coding agent: 71 specialist agents, 314 skills, 98 commands, hooks, rules, memory, session learning and AgentShield config scanning. Works best with Claude Code, with install paths for Codex and many other tools.

How it works in six steps

1. **Plan**
   planner agent · /ecc:plan
2. **Test first, then code**
   RED → GREEN → REFACTOR
3. **Fresh-context review**
   code-reviewer agent
4. **Hooks run fixed checks**
   outside the prompt
5. **Remember and learn**
   summaries · instincts · skills
6. **AgentShield**
   scans hooks, MCP, permissions

Quick start

```
# Install with the wizard
npx ecc-universal@2.2.3 setup

# Or inside Claude Code
/plugin marketplace add https://github.com/affaan-m/ECC

# Then install the plugin
/plugin install ecc@ecc

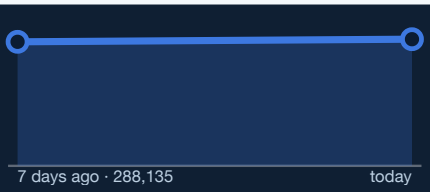

# Start a feature
/ecc:plan "Add auth"

# Needs: Node.js 18+ for the installer; Git and Claude Code 2.1+ for the Claude plugin
```

Key commands / features

- **`/ecc:plan "..."`** — plan a feature
- **`/code-review`** — review with fresh context
- **`/build-fix`** — fix build errors
- **`/refactor-clean`** — remove dead code
- **`/security-scan`** — scan the agent configuration

Growth

Two real points: the start of the window and today, axis from zero. The gain is as reported by GitHub Trending; we did not rebuild the star history.

Why this repo exists

- Agents write fast but discipline comes and goes: plans vanish in the chat, the reminder to write tests first gets forgotten.
- One session writing and reviewing its own code misses bugs; ECC turns plan, test and review into a workflow with evidence.

What to use it for

- Plan before the agent writes code
- Enforce test-first and fresh-context review
- Keep context lean: skills load on demand
- Scan the agent config with AgentShield

Think twice before you use it

- A huge bundle: start with one workflow; rules always load, so choose carefully.
- Hooks run code on your machine; pick the hook level when installing.
- Outside Claude Code, Codex and Qoder many platforms have limited support: see the support table.
- Install only from official sources and pick ONE install method per tool.
