artcraft

An IDE for artists: build the 2D/3D scene before you generate AI images and video.

ArtCraft (MIT or Apache-2.0) is a desktop app for Windows, macOS and Linux for controlled AI image and video making: layer 2D images, build 3D scenes, pose characters, set camera angles, then pick image, video, music, 3D or world models from many providers.

How it works in six steps

1. **Layer 2D images** — backgrounds, objects, cutouts
2. **Build a 3D scene** — backdrop, props, models
3. **Pose the characters** — poses and camera angle
4. **Pick a model** — image, video, music, 3D
5. **Generate image or video** — from the built scene
6. **Refine on the canvas** — draw, masks, inpainting

Quick start

```
# Download the stable installer
getartcraft.com

# Or the latest build
GitHub Releases (AppImage, DEB, RPM, Flatpak)

# Build from source
_docs/dev_setup.md in the repo

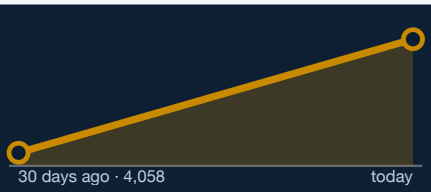

# Pick an image model
in the app, by provider

# Needs: Windows, macOS or Linux; terms and costs depend on the model provider you choose
```

Key commands / features

- **`Image to Location`** — put a character in the same environment
- **`3D Image Compositing`** — layer backdrop, objects and props in 3D
- **`2D Image Compositing`** — layer images, remove backgrounds, draw
- **`Image to 3D Mesh`** — turn an image into a 3D object
- **`Character Posing`** — set character poses and camera angle

Growth

Two real points: the start of the window and today, axis from zero. The gain is as reported by GitHub Trending; we did not rebuild the star history.

Why this repo exists

- A prompt box is one text field, while artists need control over layout, characters and camera angle.
- Build the scene before you generate, so typing becomes controlled, repeatable craft.

What to use it for

- Build the scene before generating an image or video
- Keep characters and environments consistent across scenes
- Turn an image into a 3D object to set the camera
- Edit images with drawing, masks and inpainting

Think twice before you use it

- Some models in the catalog are turned off or limited in the desktop app (README).
- Models belong to third-party providers: terms and costs vary.
- Check the usage rights for the images and video you create before you post them.
- The repo gained stars very fast in 30 days: stars measure attention, not quality.

Sources: the repo's README, https://github.com/storytold/artcraft, https://getartcraft.com. Stars: GitHub API; gains: GitHub Trending (as reported by Trending), snapshot Nov 8, 2026; stars measure attention, not quality: re-check before relying on them. Summarized in Kieu Studio's own words; commands copied from the README; no third-party logos or screenshots.
Disclosure: drafted with AI assistance; the voice and presenter in the videos are AI-generated. Not investment advice, and not endorsed by Kieu Studio. **kieu.app**
